

PROJECT:

JACKSON OAKS WELL REHABILITATION

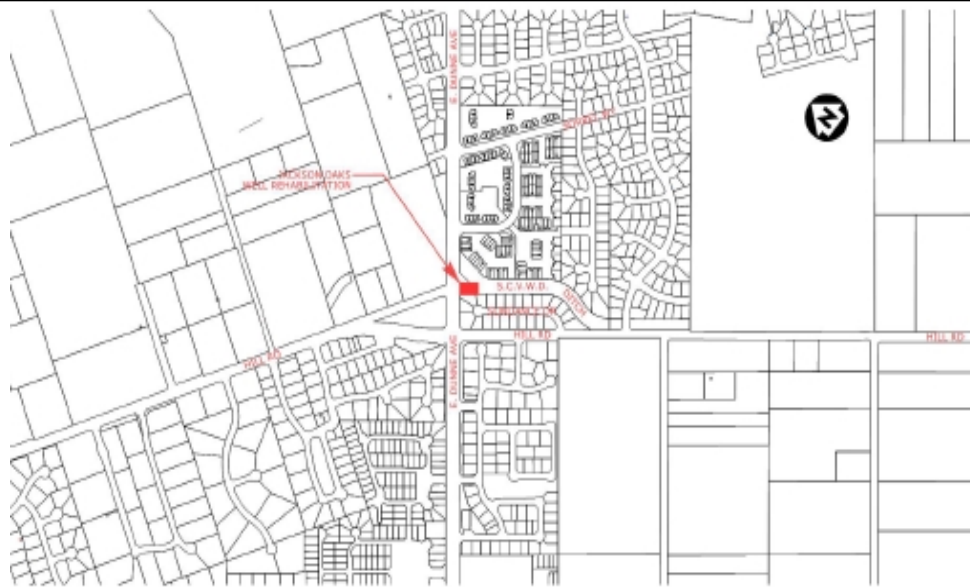

PROJECT DESCRIPTION:

The city has awarded a contract to drill a replacement water supply well at the existing Jackson Oaks Well site. The current Jackson Oaks Well was put into service in 1927 and has outlived its expected service life. Due in large part to its age, its water production rate has dropped over the past years and now must be replaced. The new well is expected to increase water production to 800 gallons per minute.

Under a separate contract, the existing building will be upgraded to include a new well pump, new electrical control panel and other improvements to meet current safety standards and improve efficiencies and reliability.

PROJECT LOCATION:

East Dunne Avenue (east of Fire Station at Hill Road)

PROJECT SITE PHOTO:

PROJECT SCHEDULE:

The well has been drilled.

DESIGN: In progress, 75% complete

BIDDING: November 2016

CONSTRUCTION: January/February 2017
