

**PROJECT:**

**BOYS RANCH #2 WELL REHABILITATION**

**PROJECT DESCRIPTION:**

The city completed a project to drill a replacement water supply well at the existing Boys Ranch #2 Well site. The current Boys Ranch #2 well site outlived its expected service life. Due in large part to its age, its water production rate has dropped over the past years and was replaced. The new well is expected to increase water production to 800 gallons per minute.

Under a separate contract, the existing building will be upgraded to include a new well pump, new electrical control panels and other improvements to meet current safety standards and improve efficiencies and reliability.

**PROJECT LOCATION:**

**East Dunne Avenue (east of Fire Station at Hill Road)**
