

E- Waste

Improper disposal of electronic waste that contains heavy metals and pollutants poses a significant threat to human health, leading to respiratory illness, skin infections, stomach disease and other conditions.

Recycling your waste electronics saves resources and protects the earth because new metals don't have to be mined.

When being recycled or disposed of, computer and television monitors contain cathode ray tubes, which typically contain enough lead to be classified as hazardous waste. A typical computer monitor may contain up to eight pounds of lead.

In addition, some researchers estimate that nearly 75 percent of old electronics are in storage, in part because of the uncertainty of how to manage the materials. Combine this with increasing advances in technology and new products headed towards the market and it becomes apparent that proper "e-waste" disposal is crucial to the health of both people and planet.

Frequently Asked Questions?

E-Waste >>>

Is a popular, informal name for electronic products nearing the end of their "useful life." Computers, televisions, VCRs, stereos, copiers, digital cameras, cell phones, video games and fax machines are common electronic products. Many of these products can be reused, refurbished, or recycled. Unfortunately, electronic discards are one of the fastest growing segments of our nation's waste stream.

Is "E-Waste" Clearly Defined? >>>

The term "e-waste" is loosely applied to consumer and business electronic equipment that is near or at the end of its useful life. There is no clear definition for e-waste; but as a general rule of thumb, all household appliances with an "on/off" switch should be grouped into the category and disposed of properly.

What Should I Do with My Electronic Discards? >>>

The mantra of "**Reduce, Reuse, Recycle**" applies here. **Reduce** your generation of e-waste through smart procurement and good maintenance. **Reuse** still functioning electronic equipment by donating or selling it to someone who can still use it. **Recycle** those components that cannot be repaired.

E-Waste Materials:

- Computer Monitors
- Television Sets
- TV/VCR combos
- ...or anything else with a Cathode Ray Tube
- Computers
- CPUs
- Keyboards
- Printers
- Scanners
- ...or any other computer peripheral
- Personal Electronics
- Cell Phones
- Household Appliances
